KEY FINDINGS & ANALYTICAL INSIGHTS

► DATA AVAILABILITY GAP

Only 3/10 states (30%) in this snippet have overweight classification data vs 22/40 (55%) likely due to insufficient sample sizes for the "Other" race/ethnicity subgroup. This is a cr

► INACTIVITY OUTLIERS — MIDWEST/SOUTH CLUSTER

Illinois (33.1%) and Missouri (30.7%) are the highest inactivity states, 45% and 35% above the national benchmark. Four states all have wide CIs, indicating data volatility, but directionally consistent elevated

► LOW-INACTIVITY NEW ENGLAND PATTERN

New Hampshire (11.6%), Maine (13.5%), and Vermont/Connecticut cluster are the least inactive. Western outlier achieving comparable activity levels.

► STATISTICAL PRECISION WARNING

Texas OWS estimate (47.3%) has a 95% CI spanning 28.6–66.8% — a width of 38.2 percentage points, indicating high uncertainty in decisions without larger sample validation. New York (n=536) is the most reliable state estimate.

► REGIONAL TREND

Western states (CO, OR, GA, ME, NH, PA) consistently fall below the national inactivity benchmark, suggesting potential public health implications for targeted intervention funding.
